TITLE: . *College Assignment Submission Tracker*

GITHUB LINK : <https://github.com/Thayalan-14/College-Assignment-Submission-Tracker>

1. ABSTRACT

The College Assignment Submission Tracker is a web-based application that helps faculty manage assignment submissions efficiently. It allows users to add assignments, update submission status (Submitted, Pending, or Late), filter by subject, and view a dashboard summary. The system reduces manual work, improves organization, and makes tracking assignments faster and easier.

2. PROBLEM STATEMENT

Tracking assignment submissions manually is time-consuming and error-prone. Faculty need a simple system to manage submitted, pending, and late assignments efficiently.

3. OBJECTIVES

- To provide an easy way to add and manage assignments.
- To track assignment status (Submitted, Pending, or Late).
- To filter assignments by subject.
- To display a dashboard summary for quick monitoring.
- To reduce manual work and improve efficiency.

4. PROJECT SCOPE

- **Features Included:**
- *Add assignment details (title, subject, due date).*
- *Update assignment status (Submitted, Pending, Late).*
- *Filter assignments by subject.*
- *View dashboard summary of assignments.*
- **Future Enhancements:**
- *Student login system.*
- *Email reminders for due dates.*
- *Database and cloud storage integration.*
- *Report generation and analytics.*

5. TECHNOLOGIES USED

- **HTML5** – To create the webpage structure.
- **CSS3** – To design and style the user interface.
- **JavaScript (ES6)** – To implement application logic and interactivity.
- **Local Storage** – To save assignment data in the browser.
- **Visual Studio Code (VS Code)** – As the code editor.
- **Google Chrome** – For testing and running the application.

6. APPLICATION FLOW

- The user opens the application.
- Enters the assignment title, subject, due date, and status.
- Clicks the **"Add Assignment"** button to save the assignment.
- The assignment is displayed in the table.
- The user can update the submission status or filter assignments by subject.
- The dashboard automatically updates the total, submitted, pending, and late assignment counts.

7. KEY REACT CONCEPTS USED

- This project was developed using **HTML, CSS, and JavaScript**, so React concepts were not implemented.
- JavaScript functions were used to manage assignment data and user interactions.
- DOM manipulation was used to dynamically update the assignment list and dashboard.
- Local Storage was used to store assignment data and retain it after page refresh.

8. EXPECTED OUTPUT

The screenshot displays the 'College Assignment Submission Tracker' web application. At the top, there are four colored boxes showing counts: '1 Total Assignments' (light blue), '1 Submitted' (green), '0 Pending' (orange), and '0 Late' (red). Below these are input fields for 'Assignment Title', 'Subject', 'dd-mm-yyyy' (with a calendar icon), and a 'Pending' status dropdown, followed by an 'Add Assignment' button. A 'Filter by Subject' dropdown is set to 'All'. The main table has columns: Title, Subject, Due Date, Status, and Action. It contains one row with 'ass 1', 'tamil', '2026-06-12', and a 'Submitted' status dropdown. The 'Action' column has a red 'Delete' button. The Windows taskbar at the bottom shows the date as 25-06-2026 and time as 21:46.

Title	Subject	Due Date	Status	Action
ass 1	tamil	2026-06-12	Submitted	Delete

9. CHALLENGES FACED

- *Managing assignment data without a database.*
- *Updating the dashboard automatically when data changes.*
- *Implementing subject-based filtering.*
- *Resolved these challenges using **JavaScript** and **Local Storage** for dynamic updates and data storage.*

10. LEARNING OUTCOMES

- *Learned to build a responsive web application using **HTML**, **CSS**, and **JavaScript**.*
- *Improved skills in **DOM manipulation** and **event handling**.*
- *Gained experience using **Local Storage** for data management.*
- *Enhanced problem-solving and web development skills.*

11. CONCLUSION

*The **College Assignment Submission Tracker** successfully simplifies the process of managing assignment submissions. It enables faculty to track submitted, pending, and late assignments efficiently, reducing manual work and improving overall organization and productivity.*
